Frontend Engineer (React, React Native, TypeScript)
Design systems, product UI & AI agent tooling

Portfolio

Profile

Frontend engineer with 5 years of building web and mobile apps in React, React Native and TypeScript, mostly in consulting teams working with designers and clients. At Coinme, now part of Polygon Labs, I started the cross-platform design system, built regulated product flows and partner SDKs, and the Claude Code commands I wrote became the team's shared plugin marketplace. The part of frontend I enjoy most is the design side.

Experience

Web Engineer – **Coinme (acquired by Polygon)**

OCT 2024 – OCT 2026

A white-label crypto widget that fintech and wallet apps embed in their iOS, Android and web apps; one deployment, rebranded per partner at runtime. Joined through Endava; hired directly by Polygon in Feb 2026. Frontend team of 7–10; about 270 merged MRs across 11 repositories.

Design system & UI craft

- **Founded and led the cross-platform design system** for two years. One React Native codebase (react-native-web) sits behind every screen on iOS, Android and web, across 137 releases.
- Built 13+ of its 34 components, including an **interactive price chart** for web and native (Reanimated, Gesture Handler).
- Designed the **theming and white-label model** with design tokens, dark mode and a "host theme wins" merge order, so partners rebrand through configuration instead of code.
- Documented components in Storybook and worked with the designers on how the system looks and feels.

AI-native engineering

- Among the first on the team to use **Claude Code agents** every day. Wrote the first commands for code review, test and component scaffolding and MR submission across GitLab, Jira and Slack, which grew into the team's **shared plugin marketplace.**
- Built an **MCP integration and agent** that syncs missing translation keys to Tolgee, plus a post-push hook that flags them. Adopted org-wide, with least-privilege credentials.
- Made the **CI AI code reviewer incremental.** Also contributed to a git-generated **context layer for coding agents** that maps a 27-repo platform and cuts loaded context about 6–16×.

Product flows

- **Owned the regulated flows** for identity verification (KYC), enhanced due diligence (AML) and cash-out at ATMs, with live quotes, OTP and real-time status over server-sent events. Each one is an **explicit state machine** that fails closed when the backend isn't clear.
- Main developer of the **multi-chain crypto wallet** (dashboard, QR send, address validation). Also built the cash-buy screens, tax documents and the cash-location finder.
- Wrote four of the **orchestrator's** eighteen flow integrations, including the routing that holds flagged users before any transaction. The orchestrator mounts each partner's flows from config.

SDKs, tooling & delivery

- Built most of the **card-collection SDK** for vanilla JS, React and React Native. Card numbers and SSNs go into vault-hosted fields, so partners stay **out of PCI DSS scope.**
- Built the **customer-onboarding SDK** for JS and React Native, with a framework-free core for Vue, Angular and vanilla JS. Took the React Native version from first commit to production **v1.0 in six days.**

- Built a **Node.js CLI** that became the team's standard package-update command, and wrote the SDK docs and agent skills for the public partner docs site.

React / React Native Developer – **Endava (ex FIVE)**

SEP 2021 – FEB 2026

Consulting; from Oct 2024 seconded to Coinme. Before that, web and mobile products for clients in fintech, hospitality and entertainment, working directly with client designers, backend teams and stakeholders.

- Helped set up the **architecture and coding standards** in modular monorepos (Redux Toolkit, RTK Query, TanStack Query, Jotai). Cut CI/CD build times and improved performance with lazy loading and code splitting.
- Built **accessible (WCAG) interfaces** with over 80% unit-test coverage.
- **Led an in-house project** and mentored a junior developer; conducted technical interviews and presented demos to clients.

Selected clients

- **ASCAP** 2023 – 2024 · React Native app for artists to register works and manage royalties: a 12-step registration flow and onboarding animations (Reanimated, Lottie).
- **Opayo** 2023 · Payment gateway for a banking client with fully WCAG-compliant forms.
- **Cooking Light Diet** 2021 – 2022 · Meal-planning app and React Admin CMS, built from the ground up.

Skills

Frontend & mobile	React, React Native, Next.js, Expo, TypeScript, JavaScript, react-native-web
UI, motion & design systems	design tokens and theming, Reanimated, Gesture Handler, Lottie, GSAP, three.js, Tailwind, NativeWind, styled-components, Material UI, Storybook, responsive design, accessibility (WCAG)
AI-assisted development	Claude Code (agents, skills, hooks, plugins), Model Context Protocol (MCP), AI code review in CI, context engineering for coding agents
State & data	Redux Toolkit, RTK Query, TanStack Query, Jotai, React Hook Form, server-sent events
Backend & tooling	Node.js, CLI tooling, npm publishing
Testing & delivery	Jest, Vitest, React Testing Library, MSW, Vite, Turborepo, GitLab CI/CD, semantic-release
Architecture	component-based architecture, monorepos, micro-frontends, configuration-driven multi-tenant UI, state machines, SDK design, WebView and iframe embedding

Education

Bachelor of Computer Science 2018 – 2021

Faculty of Electrical Engineering and Computing (FER), University of Zagreb

Languages

English – fluent

Croatian – native
