Frontend & Product Engineer
AI agents, product UI & design systems · React, TypeScript

petra-presecki.pages.dev

Profile

Frontend and product engineer, 5 years in React, React Native and TypeScript. At Coinme, now part of Polygon Labs, I was one of the first to bring coding agents into my team's daily work, and owned what lets one product run as a different app for every partner: the design system, the regulated flows and the partner SDKs.

Experience

Web Engineer, Coinme (now Polygon Labs)

OCT 2024 – OCT 2026

A crypto widget that fintech and wallet apps embed in their iOS, Android and web apps: one product, rebranded per partner. Joined through Endava; hired directly by Polygon in Feb 2026. Team of 7–10; about 270 merged MRs.

AI agent tooling

- Among the first on the team to work agent-first. My Claude Code commands became the base of the team's plugin marketplace (2 plugins, 17 skills, 11 subagents), now in **12 repos**.
- Contributed to its agentic delivery workflow: each skill hands off to a subagent with scoped tools and a pinned model (Opus to plan, Sonnet for mechanical work), and every path ends in a merge request a person reviews.
- Co-built a context layer for coding agents across 27 repos, generated from git, that cuts what each session loads **6–16×**. Made the CI AI code reviewer incremental.
- Built an MCP integration that syncs missing translations to Tolgee, plus a post-push hook that flags them. Adopted org-wide; I moved it to least-privilege credentials.
- Wrote the partner SDK docs for people and their coding agents: TSDoc on every export and agent skills on the public docs site.

Design system & product platform

- Founded and led the cross-platform design system for two years: one React Native codebase behind every screen on iOS, Android and web, shipped across **137 releases**. Built 13+ of its 34 components.
- Designed the theming model that became the white-label contract: partners rebrand through configuration, never by forking code.
- Built 4 of the orchestrator's 18 flow integrations, including the routing that stops flagged users before any transaction. Live in Trust Wallet's Cash Deposits.

Regulated flows & partner SDKs

- Owned identity verification (KYC), AML due diligence and ATM cash-out, each a state machine that fails closed. Main developer of the multi-chain wallet; cleared a major wallet partner's launch blockers.
- Took the React Native onboarding SDK from first commit to **production v1.0 in six days** (200+ tests), splitting the work so three engineers built it in parallel.
- Built most of the card-collection SDK for JS, React and React Native, keeping partners **out of PCI DSS scope**, and ran its security testing on iOS and Android.

React / React Native Developer, Endava (ex FIVE)

SEP 2021 – FEB 2026

Client-facing product work for banking, music and nutrition clients, straight with their designers and backend teams. Seconded to Coinme from Oct 2024.

- Led an in-house project, presented demos to clients, mentored a junior developer and ran technical interviews.

- Set architecture and coding standards in modular monorepos, cut CI/CD build times, and shipped accessible (WCAG) UI with 80%+ test coverage.
- **ASCAP** 2023 – 2024 · React Native app for songwriters to register works and manage royalties.
- **Opayo** 2023 · WCAG-compliant payment forms for a banking client.
- **Cooking Light Diet** 2021 – 2022 · Meal-planning app and admin CMS, built from the ground up.

Projects

- **festival-discovery** 2026 · lineage-5qn.pages.dev · Built end to end: an agentic pipeline turns festival websites into structured data, scored by evals against a hand-checked golden set at **98% lineup F1 for $0.31 per festival**, with the model picked on cost and accuracy. A person reviews every extraction.
- **creative-kit** 2026 · The library every site I build starts from: motion blocks, themes, a CLI that copies them in as source, and a Claude Code skill that drafts concepts.

Skills

AI & agents	Claude Code (agents, skills, hooks, plugins), MCP, agentic workflows, context engineering, evals, structured outputs, AI code review in CI
Frontend	TypeScript, React, React Native, Next.js, Expo, react-native-web
UI & design systems	design tokens, theming, accessibility (WCAG), Storybook, Tailwind, Reanimated, GSAP, three.js
Architecture & testing	configuration-driven UI, state machines, SDK design, Redux Toolkit, TanStack Query, monorepos, Jest, Vitest, React Testing Library, MSW, GitLab CI/CD

Education

Bachelor of Computer Science 2018 – 2021

Faculty of Electrical Engineering and Computing (FER), University of Zagreb

Languages

English – fluent

Croatian – native
