Profile

Product engineer with 5 years of building polished web and mobile experiences in React, React Native and TypeScript, most of it in a consulting environment alongside designers, strategists and client teams. I founded and led a cross-platform design system (iOS, Android, web) with tokens, theming and smooth Reanimated interactions, and owned complex product flows from first commit to production.

AI is a core part of how I build: I created Claude Code agents, MCP integrations and AI code review that became the shared tooling of a 7–10 person frontend org. I care about the details designers care about – motion, spacing, consistency – and about explaining technical trade-offs clearly to non-engineers.

Experience

Web Engineer - **Coinme (acquired by Polygon)**

OCT 2024 – OCT 2026

Oct 2024 – Feb 2026 via Endava; Feb 2026 – Oct 2026 employed directly by Polygon. A white-label crypto widget that fintech and wallet apps embed in their iOS, Android and web apps; one deployment, rebranded per partner at runtime. Frontend team of 7–10; about 270 merged MRs across 11 repositories.

Design system & UI craft

- **Founded and led the cross-platform design system** for two years: one React Native codebase on iOS, Android and web (react-native-web), behind every screen in the product across 137 releases.
- Built 13+ of its 34 components, including an **interactive SVG price chart** with gesture-driven animation (Reanimated, Gesture Handler).
- Designed the **theming and white-label model** (design tokens, dark mode, a "host theme wins" merge order), so partners rebrand through configuration, not code.
- Documented components in Storybook and collaborated closely with designers on the system's visual language.

AI-native engineering

- Built **Claude Code commands and agents** for code review, test and component scaffolding, and end-to-end MR submission across GitLab, Jira and Slack; they grew into the frontend org's **shared Claude Code plugin marketplace**.
- Built an **MCP integration and agent** that syncs missing translation keys to Tolgee, plus a post-push hook that flags them; adopted org-wide.
- Made the **CI AI code reviewer incremental** and co-built a git-generated **context layer for coding agents** that maps a 27-repo platform, cutting loaded context about 6–16×.

Product flows, end to end

- **Owned three complex journeys** from first commit to production: identity verification, enhanced due diligence, and cash-out at ATMs with live quotes, OTP confirmation and real-time status over server-sent events.
- Modeled each as an **explicit state machine** with clear user-facing states for every outcome.
- Main developer of the **multi-chain crypto wallet** (dashboard, QR send, address validation); built large parts of the buy journey and the cash-location finder.

SDKs, tooling & delivery

- Took the **React Native onboarding SDK** from first commit to production v1.0 in six days (dual ESM/CJS packaging, CI/CD, typed errors); extended the web SDK with a framework-free core for Vue, Angular and vanilla JS partners.
- Built a **Node.js CLI** that became the team's standard package-update command; wrote SDK docs and agent skills for the public partner docs site.

React / React Native Developer - **Endava (ex FIVE)**

SEP 2021 – FEB 2026

Consulting; from Oct 2024 seconded to Coinme. Before that, web and mobile products for clients in fintech, hospitality and entertainment, working directly with client designers, backend teams and stakeholders.

- Contributed to **architecture and development standards** in modular monorepos (Redux Toolkit, RTK Query, TanStack Query, Jotai). Cut CI/CD build times and improved performance with lazy loading and code splitting.
- Built **accessible (WCAG) interfaces** with over 80% unit-test coverage.
- **Led an in-house project** and mentored a junior developer; conducted technical interviews and presented demos to clients.

Selected client projects

- **ASCAP** 2023 – 2024 · React Native app for artists to register works and manage royalties. Built a 12-step registration flow with validation, guided onboarding animations with Reanimated and Lottie, and type-safe data with RTK Query.
- **Opayo** 2023 · Web payment gateway for a banking client. Built secure forms with React Hook Form and Material UI, fully WCAG-compliant (keyboard navigation, screen readers, contrast).
- **Cooking Light Diet** 2021 – 2022 · Meal-planning mobile app and web admin, built from the ground up with the design and dev teams: a React Admin CMS, reusable React Native components and navigation flows.

Skills

Frontend & mobile	React, React Native, Expo, TypeScript, JavaScript, react-native-web
UI, motion & design systems	design tokens and theming, Reanimated, Gesture Handler, Lottie, Tailwind, NativeWind, styled-components, Material UI, Storybook, responsive design, accessibility (WCAG)
AI-assisted development	Claude Code (agents, skills, hooks, plugins), Model Context Protocol (MCP), AI code review in CI, context engineering for coding agents
State & data	Redux Toolkit, RTK Query, TanStack Query, Jotai, React Hook Form, server-sent events
Backend & tooling	Node.js, CLI tooling, SDK design, npm publishing
Testing & delivery	Jest, Vitest, React Testing Library, MSW, Vite, Turborepo, GitLab CI/CD, semantic-release
Architecture	component-based architecture, monorepos, micro-frontends, configuration-driven multi-tenant UI, state machines

Education

Bachelor of Computer Science 2018 – 2021
Faculty of Electrical Engineering and Computing (FER), University of Zagreb

Languages

English - fluent
Croatian - native
